Hydrelis Parameter Definition & Setup

Parameter settings in
Hydrelis products

HPDS
v 1.535

*HPDS Software
is compatible
with the entire
range of
Hydrelis products*

- Adjusting water flow cut-off sensitivity
- Determining maximum flow authorized
- Choice of alarm modes
- Adjusting time parameters (deactivation / absence)
- Recording personalized settings
- Operation monitoring in real time

DEFINITION OF RELEASE PARAMETERS

Abnormal consumption:

- Minimum and maximum flows authorized.
- Time parameters associated with the stability of both flows.
- Temporizations of pre-alarms.

Other parameters:

- Overflow level.
- Deactivation (inhibition).
- Prolonged absence.

DEFINITION OF ACTION

- Alarms: Signal sent by the equipment which generates a beep and/or a light signal on the remote follow-up systems.
- Cut-off: Automatic valve release.
- Pre-alarm: Period during which visual and sound alarms are emitted to draw the user's attention before cut-off.

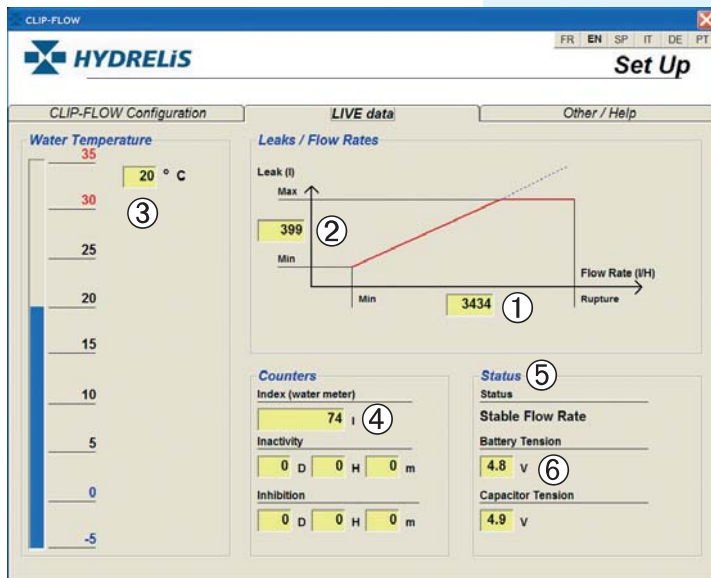

MANAGEMENT OF CONFIGURATIONS

Management of personalized configurations:

- Importation.
- Modification.
- Exportation.
- Storage.

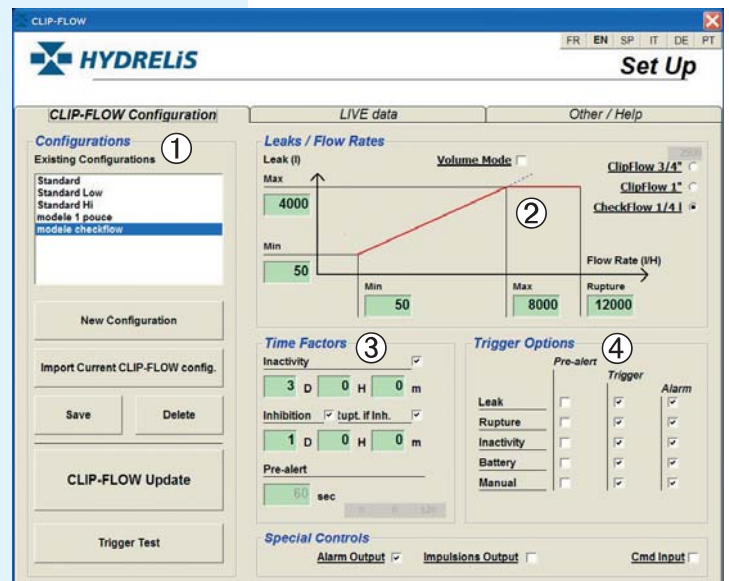

PARAMETERS SETTING

OPERATION MONITORING

Posting in real-time of:

- ① Instantaneous flow (in litres per hour).
- ② Volume of water authorized before alarm or cut-off.
- ③ Temperature.
- ④ Index of water consumption.
- ⑤ Status.
- ⑥ Battery level.

- ① Storage of configurations.
- ② Sensitivity (flow rate / volume).
- ③ Time factors.
- ④ Trigger options.

OTHER FUNCTIONS

- Activation of interfaces with Building Automation systems.
- Loading a portable memory (standard USB key) usable on site for an easy update on installed equipment.

TECHNICAL FEATURES

- Compatible with the entire range of Hydrelis products.
- No limit to the number of equipment and configurations managed.
- Available in five languages (English, French, German, Portuguese and Spanish).
- Provided with a USB cable for connecting a PC to Hydrelis equipment.
- Windows PC Version.
